

So you've taken ALEKS, now what?

View your course placement results by logging into your ALEKS account by meeting with a KCC academic advisor.

You can improve your initial score with practice! Studies show students who spend time in the Prep & Learn Module within the account can improve their math skills. In fact, our research indicates that those students not only increase their math course placement, but are also 10% more likely to pass their Math course with a "C" or better.

Keep in mind, you will have access to the Prep and Learning modules for 6 months from your first test attempt.

Retest after a 48 hour "cool down" period and after completing the required Prep and Learning.

2nd attempt – at least 3 required hours within 6 months after initial assessment

3rd attempt – at least 5 additional required hours within 6 months after initial assessment

4th attempt – at least 5 additional required hours within 6 months after initial assessment

5th attempt – at least 5 additional required hours within 6 months after initial assessment
